WELCOME TO UNI-SPRAY SYSTEMS INC.

Through the 1970's and 80's Uni-Spray Systems Inc existed as Auto Flush Systems, a company well known in the bottling industry. Through those years Auto Flush introduced literally hundreds of innovative new products. From seals, backrests and filler tubes to bushings, centering bells and bottle washer components, many of these parts have become standard equipment on fillers throughout the world. In the late 1980's a diversification in to the finishing industry brought about a new name, Uni-Spray Systems Inc.

Today Uni-Spray Systems Inc services over 60 countries worldwide and has continued its ongoing commitment to research and development. Through these efforts we continue to bring innovative new products to the bottling industry.

Uni-Spray understands the demands of today's high speed bottling environments. Our replacement parts are manufactured from the highest quality materials to provide your company with a product that is not only superior in performance but also long wearing. A long lasting part means fewer replacements and consequently fewer shutdowns. This in turn translates into significant savings for your company. Uni-Spray's manufacturing processes are virtually self-contained and as a result we maintain a high degree of control over our design and cost factors, start to finish. You, in turn, enjoy the benefits of competitive pricing and the fastest delivery schedule in the industry.

Uni-Spray has always made efforts to provide our customers with new ideas while continuously improving our product lines. As a result we are able to offer our customers products in a large range of materials, durometers and working temperature ranges for the most demanding applications.

As a result of our forward thinking, if you require products that are not currently listed in our catalogue do not hesitate to contact us for a quote.

Uni-Spray
Systems Inc.

Bottling Division

High quality long-life wear components for the packaging industry.

Metal Finishing Division

Global supplier of innovative spray nozzle solutions.

Contract Manufacturing

Custom injection molding using cutting edge technologies.

Bottle Filler Components

Uni-Spray Systems Inc manufactures a large line of replacement parts for bottle filling machinery using the highest quality materials and cutting edge technology. Our replacement components are available for most brands of equipment and can be custom designed and manufactured to specific customer requirements. In every possible case these products have been designed to out perform OEM replacements, often at significant cost saving. If you do not see the specific product you are looking for, please, do not hesitate in contacting our design team to discuss manufacturing a part to your specific needs.

1. Sealing Rubbers

Uni-Spray manufactures high quality FDA approved TPU and TPE sealing rubbers that are molded to exacting standards in an extremely wear resistant material and available in various colors, materials and durometers from 35-95 shore A. Our inventory of sealing rubbers is huge and ever evolving.

2. Liquid Seals

Uni-Spray manufactures a variety of components that fit inside filling valves and are made from high strength, high temperature materials that perform flawlessly during Hot CIP.

3. Centering Cups

Uni-Spray custom manufactures a range of centering cups to fit many machines in many different designs, specializing in two piece centering cups with snap in inserts. The hard delrin cup is molded and/or machined to fit impeccably with our snap in polyurethane insert seals, creating very few if any crevices, for an extremely sanitary cup. These cups can be manufactured in other materials and color coded as per our customers requests.

4. One Piece Seal System

Uni-Spray manufactures the "One Piece Seal System." The seal simply snaps into the holder by hand, is replaced in seconds without tools and replaces the centering cup, sealing rubber and often, the retaining clips. Seals are color coded and can be manufactured in various designs to accomodate plants with multiple lines, or multiple products being run on one line.

Bottle Washer Components

Uni-Spray manufactures an extensive line of high quality replacement parts that are superior in design and composition to other replacement products and specifically designed for the major OEM's bottle washers. Our investment in manufacturing equipment and tooling allows us to supply our customers high quality products at prices second to none. Our products are designed to eliminate many of the ongoing issues found in the parts originally supplied with your equipment.

1. Discharge Backrests

Uni-Spray has custom designed a high strength, long life TPU backrest for the discharge of most bottle washers that eliminate issues during installation and removal of these components.

2. Conveyor Components

Uni-Spray carries a line of high quality and competitively priced replacement conveyor components for bottle washers. These products range from pocket carriers (40 or 44 wide), discharge bottle guides, and conveyor rubbers. Other products available on request.

3. Discharge Roller Shafts

Uni-Spray's bottle discharge rollers are solid stainless steel roller shafts with high strength polyurethane coatings available for 40 and 44 wide soakers. Roller shafts are made to order so please call about pricing and delivery.

4. Replacement Soaker Pockets

Uni-Spray's custom designed soaker pockets, available with wide and narrow neck openings in both standard and end pocket configurations have virtually eliminated all of the problematic design issues associated with the OEM components.

5. Rinser Cups

Uni-Spray has designed a super strong replacement for OEM rinser cups that are available in both clamp-on and bolt in designs, and are color coded to identify their fit on certain pipe sizes. All cups are available with various diameter spray orifices. As a compliment to our line of bolt on cups we also offer stainless steel bolt in nozzles in various thread sizes and orifice dimensions.

Pasteurizer Components

Uni-Spray manufactures an ever evolving line of components for pasteurizers. Pasteurizers use many types of spray nozzles therefore providing an easy off shoot of our pre-treatment and spray system line. Our line of components also includes several spray bar components and tools used to make replacement easier and more efficient. Since the spray nozzles are very specific to certain applications, we ask that you call to discuss the correct nozzle for you.

1. Spray Bar Grommets

Uni-Spray has overhauled the standard rubber OEM spray bar connection and developed another product expected to last in the range of 2-4 times as long as OEM replacement. Our polyurethane spray bar grommets are compatible with most chemicals in both hot and cold zones and have been designed for easier installation. A custom tool has also been developed to make removal a snap.

2. Spray Nozzles

Uni-Spray carries an extensive line of spray nozzles to suit every application. We ask that you contact us to specify your specific nozzle requirements due to the large selection of products.

Can Filler Components

Uni-Spray manufactures a selection of can line components for the most popular can fillers, many of these components are custom designed and made specifically to improve existing filler's performance.

Keg Line Components

Uni-Spray Systems Inc. manufactures several products associated with sealing various kegs during filling and cleaning processes. These products are generally manufactured from high strength Thermo Plastic Elastomers to best suit your application and are expected to wear well even when in contact with high pressure steam. These products are available for several brands of equipment and fit a variety of kegs.

Crowner/Capper Impact Pads

Uni-Spray manufactures a unique line of crowner pads, with focus given to the crowner pads which provide wear characteristics not attainable with typical rubber components. The composition of our pads will not take on the severe compression set as rubber pads do over time, resulting in pads with a superior life span thus reducing changeovers. Our manufacturing process and design considerations ensure our customers can always expect a superior product at very competitive prices.

HIGH QUALITY MATERIALS FOR DEMANDING APPLICATIONS

Uni-Spray Systems Inc offers many of its sealing components in two main types of material; these materials are designed to replace commonly used rubber parts. Rubber parts are generally not FDA approved, cut easily and need to be replaced more often than their thermoplastic counterparts. In comparison all of our sealing components are FDA Approved, can be colour coded and because of the superior quality of the materials used can be expected to far outlast their rubber counterparts.

Thermoplastic Polyurethane — TPU

TPU offers many advantages to conventional rubber products, polyurethane exhibits excellent abrasion resistance, toughness, low temperature properties, hydraulic stability and fungus resistance. Not to mention impressive resistance to acids bases and high temperature cleaning operations. Our high quality TPU materials comply to FDA food contact and NSF61 specifications and are easily colour coded for easy identification. Uni-Spray offers these materials in a range of hardness's from 60 – 95 Shore A to best suit your demanding application.

Thermoplastic Elastomers — TPE

TPEs are high performance Elastomers which successfully combine performance characteristics of vulcanized rubbers with the processing ease and low cost of thermoplastics. In many applications, lower production costs, consistent quality and improved product performance have been a result of TPEs unique combination of material properties and production ease. Additionally TPEs withstand operation temperatures to 150C (300F) and resistance to most aqueous solutions. Low compression set, outstanding dynamic fatigue resistance, good tear strength and excellent ozone resistance are advantages of using TPE materials. Uni-Spray offers these materials in colourable FDA approved grades ranging from 55 – 80 Shore A to best suit your demanding application.

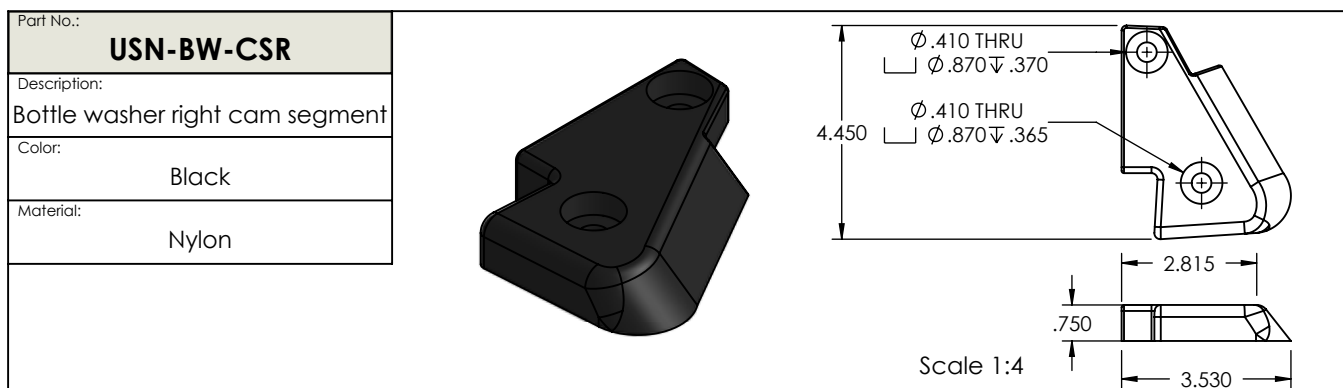

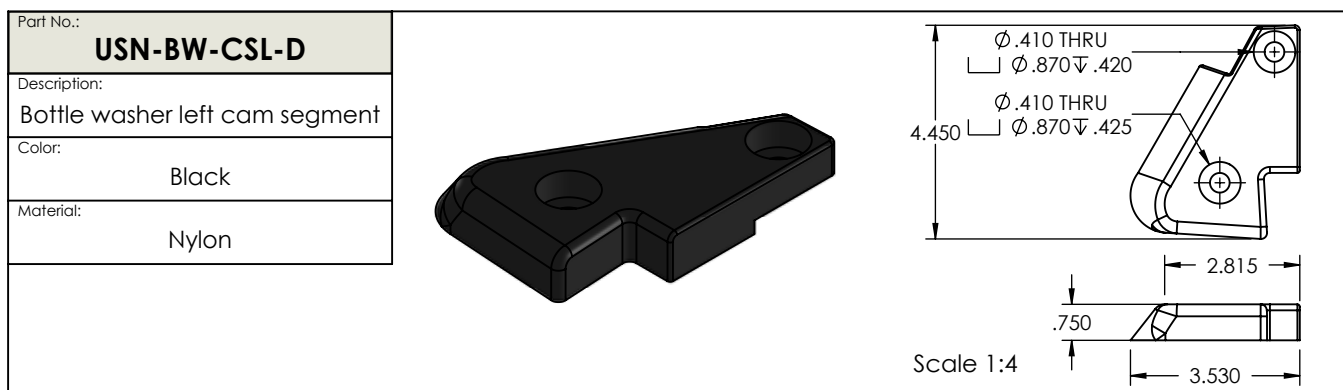

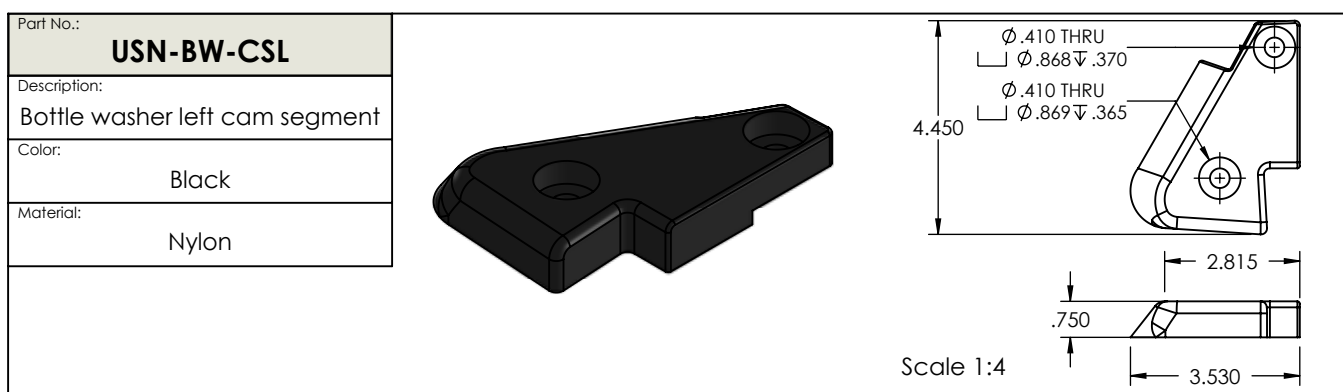

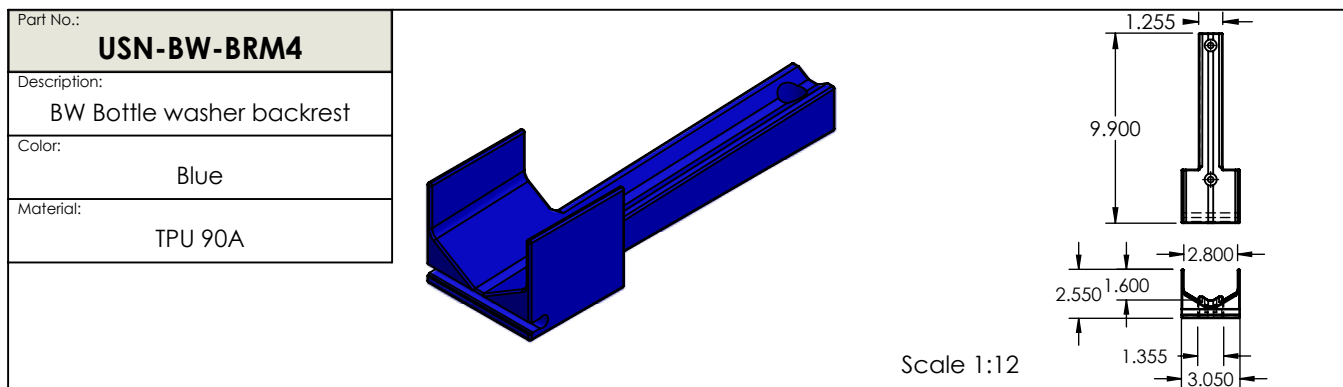

Please contact us for more options and additional material specifications.

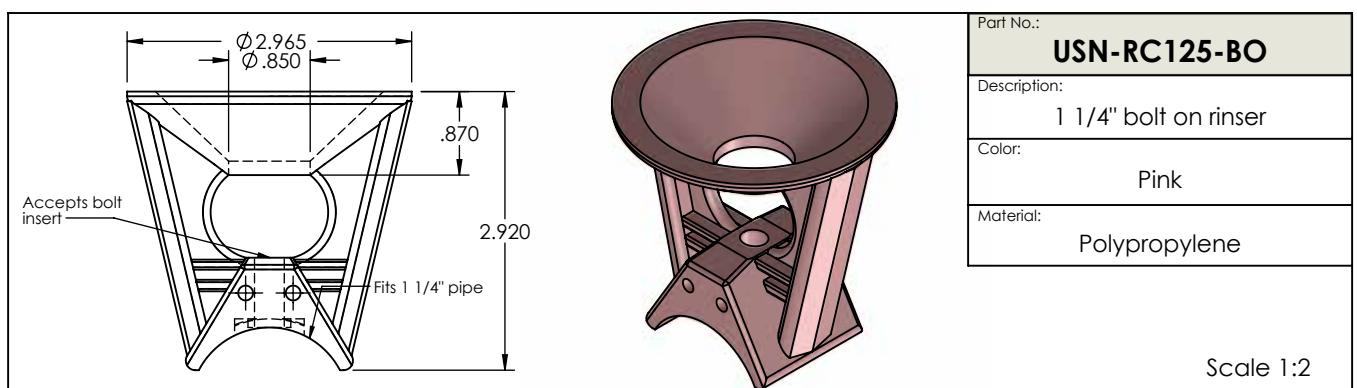

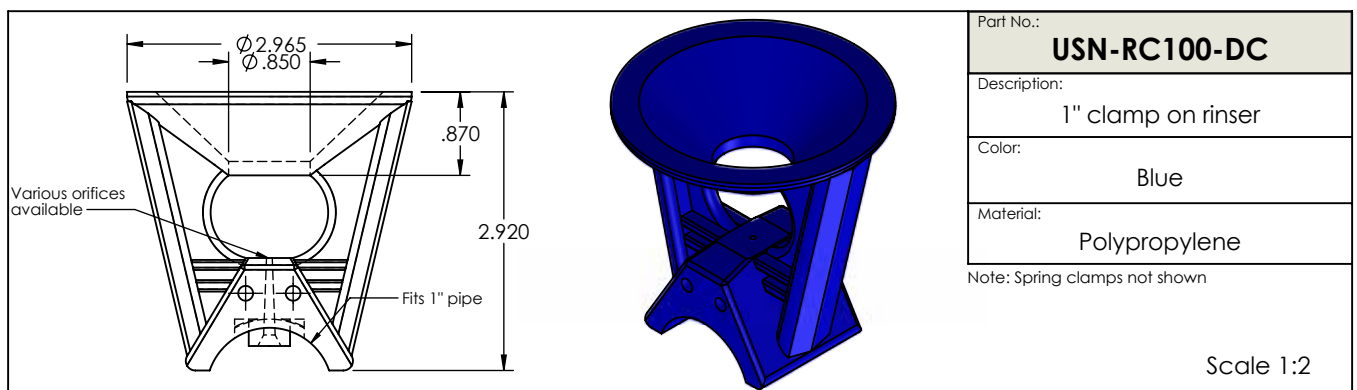

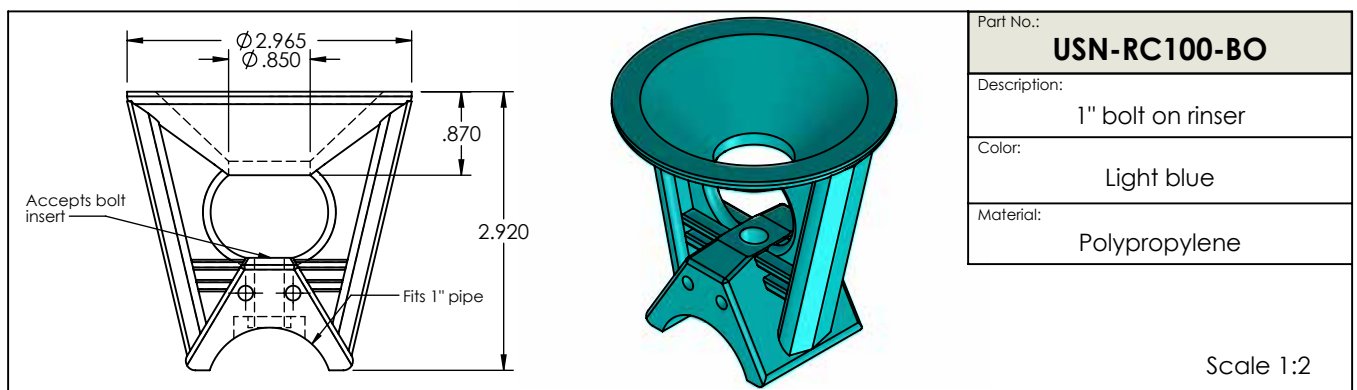

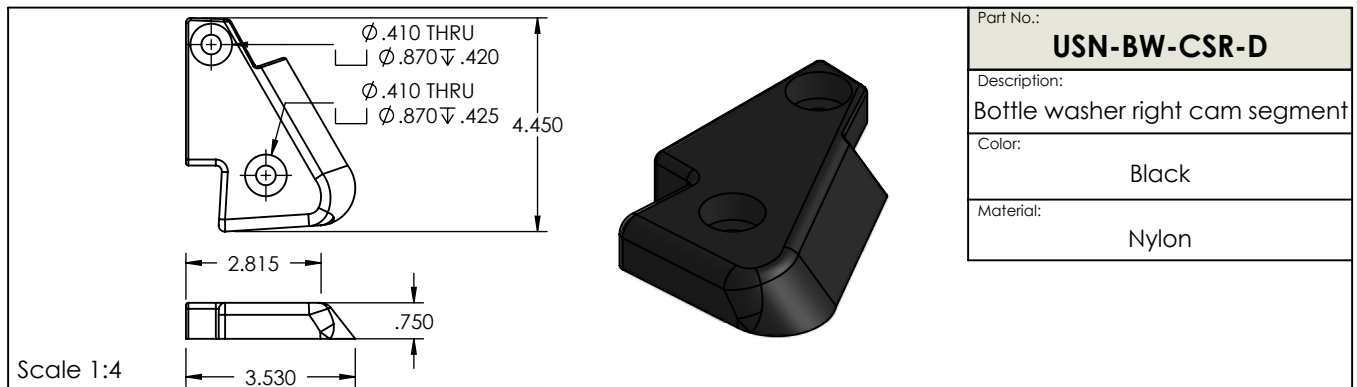

A dynamic splash of water in shades of blue and white, moving from left to right across the middle of the page. A dark blue horizontal bar is overlaid on the water splash.

Scale 1:1

A dynamic splash of water, rendered in shades of blue, flows from the left side of the page towards the right. The water is captured in mid-motion, with droplets and ripples visible. A solid dark blue horizontal bar is superimposed over the middle of the splash, containing the text 'UNIVERSAL VALVE SEALS' in white, uppercase, sans-serif font.
