

IBC Cleaner

Cleaning solutions for IBCs

Description

Intermediate Bulk Containers (IBCs) are reusable, industrial-strength containers which are used to transport a huge variety of goods and materials such as chemicals and foodstuffs. They consist of a plastic container and a rigid metal frame. They come in a number of sizes but the most common is the 1000 litre IBC which is 45x45 inches.

SNP's IBC cleaning solution makes in-house cleaning of IBCs quick and easy. It includes three components:

IBC Tank Cleaning Lance
IBC Lids with removable plugs
Orbitor Eco Rotary Jet

The components are available together or individually. The lance can be used with a number of cleaning heads but we recommend the Orbitor Eco model.

Key features

IBC Tank Cleaning Lance

1" hose tail in and 1" Bsp male outlet
Material: 316 stainless steel

IBC Lids:

- 6" thread c/w 2" centre thread with plug
- 9" thread c/w 2" centre thread with plug
Material: Polypropylene

Recommended cleaning Head:

Orbitor Eco Very Fast Cycle Rotary Jet
Material: 316ss

Key characteristics

- » Easy to assemble kit with lance which can be used with different cleaning heads
- » Two different lid sizes to fit the two main IBC sizes
- » Hygienic materials and design suitable for use in even the most hygienic applications
- » Low maintenance design

Key advantages

- » Enables IBC cleaning in-house
- » Time saving - Orbitor Eco delivers cleaning times as quick as 3 minutes
- » Considerable reduction in water usage - Orbitor Eco delivers a flow rate of between 45-85 litres per minute
- » Reduction in maintenance times - Orbitor Eco is easy to maintain and can be stripped and reassembled in 15 minutes
