

THE
SPRAY NOZZLE
PEOPLE

Storm Blaster™

Rotary Jet
Storm Tank Cleaner

TANK WASH

DESIGN FEATURES

- ▼ Entirely fluid driven meaning no external power source is required
- ▼ Fully sealed gear box allowing for muds and other high particulate fluids to be used as the cleaning media e.g. final effluent
- ▼ Stainless steel rugged design means almost no maintenance is required

SPRAY CHARACTERISTICS

- ▼ Flow rates: 100 - 570 L/min
- ▼ Working Pressure: 2 - 10 bar
- ▼ Jet length: Up to 25 metres
- ▼ Wash pattern: 180° or 360°
- ▼ Cycle times: 26-85 minutes
- ▼ Materials:
 - Housing: 316L
 - Nozzle Head: 316L
 - Gears: PEEK + 316 SS
 - Bushings: Carbon Filled PTFE
- ▼ Weight
 - 12kg for 6-12mm
 - 14kg for 14mm

The StormBlaster™ has been engineered specifically for use in cleaning large stormwater retention tanks. These machines are powerful, robust and by far the most water and energy efficient method of cleaning large tanks when compared with other methods such as tipping buckets and eductor swirl systems.

The StormBlaster™ can be deployed in cold, dirty and corrosive environments with little or no maintenance requirements.

When compared to the cost of the methods above, the StormBlaster system is considerably cheaper in terms of both installation and operating costs.

The Go-to People for spray nozzle solutions

How it works

The Storm Blaster is a fluid driven rotary jet cleaner. The cleaning fluid is pumped through the machine and this first passes through a turbine which causes the two nozzle arms to spin. The fluid then passes through the nozzles forming a powerful cleaning jet. As the arms rotate the main body also rotates in a set pattern. This is geared so that over a specific period of time (the clean cycle) the cleaning jets are brought to bear on each part of the tank ensuring a thorough, methodical clean.

For each configuration of Storm Blaster there will be a maximum jet length for any given fluid pressure. The max jet length is the overall reach of the resulting spray. The effective cleaning jet length is smaller than this and represents the distance from the machine where a reasonable cleaning action will be achieved. Clearly a more robust clean will be given the further within the effective jet length the target sits.

Made in the UK

The Orbitor is manufactured in the UK exclusively for The Spray Nozzle People by Dasic Marine
